HOW TO USE PATFIT

We refer (in parantheses) to files in the folder PATFIT19 (created during installation).

If you want to run e.g. POSITRONFIT then doubleclick on pos19.exe and you will be prompted for the input file. Unless this contains an intrinsic spectrum you will next be prompted for the name of the spectrum file (PATFIT_pos-test-spectrum.dat).
Similarly for RESOLUTIONFIT you doubleclick on res19.exe.

Alternatively, you may prefer to work directly in command (DOS) mode. This is conveniently done by using a shortcut to the destination c:\Windows\System32\cmd.exe.
